

Rotary Magnetic Position sensor

Mlab

01A_QRcode.png

It is a contactless magnetic position sensor for accurate angular measurement over a full turn of 360 degrees. To measure the angle, only a simple two-pole magnet, rotating over the center of the chip, is required. The absolute angle measurement provides instant indication of the magnet's angular position with a resolution of 0.0879° . This digital data is available as a serial bit stream.
